

GEOG.607. GLOBAL POSITIONING SYSTEM (GPS) AND BASIC GEODESY 3(2-1)

Course Objective

To train students in collecting geo-spatial data through GPS for determining position, altitude, track, velocity and time in a reference system on the Earth and export to GIS system.

Course Outline

1. Introduction

- o Global Positioning System (GPS)
- o Reference system
- o GPS Satellite Orbits
- o Propagation of the GPS Signals
- o GPS Receivers and the observable
- o GPS Observation and positioning concept

2. GPS Data Processing Methods

- o Quality control and GPS
- o GPS carrier phase
- o Ambiguity fixing concept
- o Fixing concepts
- o Active GPS measurements

3. GPS as a Tool in Global Geodynamics

- o Atmospheric Models from GPS
- o Spherical earth, ellipsoidal earth, geoidal earth
- o Cartographical use of the sphere.

4. Geographical Coordinates

- o Latitude longitude
- o Properties of the graticules
- o Determination of Horizontal Control Network, Vertical control,
- o Data export from GPS
